

Cleaning

For the benefit of others using the box please ensure your bike is clean before using the box. Ideally use degreaser on the chainset to prevent grease and grime covering the foam padding and box. If you can't be bothered to clean your bike at least cover the chainset in old t-shirts or rags. You may want to pack some Muc-Off or similar wipes to use before re-packing your bike for the return journey.

Packing Your Bike

1. Remove pedals (may require pedal wrench or large allen key)
2. Remove any accessories – water bottle holders, pumps, speedometer, lights
3. Take note of saddle position and loosen bolt a little (do not remove at this stage)
4. Loosen headset bolts
5. Turn bike upside down, remove front wheel and fix into box lid (left) using wheel skewer

6. Remove rear wheel and fix into box lid (right) using wheel skewer
7. Lay bike frame into box with chainset in rear left hand corner
8. Remove saddle and headset
9. Position headset such that brake levers are inside the box and check box closes

10. Pad around chainstay, chainrings and headset if needed with foam/old clothes to protect bike and box
11. Tighten velcro straps to ensure frame is properly secured in the box
12. Fix saddle, helmet and water bottles in the box using velcro straps
13. Lay foam sheet over frame
14. Install anti-crush pole (you may need to move wheels a fraction to ensure the pole passes spokes)
15. Secure lid and lock (there are 4 lockable latches which require small padlocks to secure, these are not supplied with the hire box)
